Summer Brings US 17-92 Interchange Improvements

Work to improve the I-4/US 17-92 interchange in Sanford (Exit 104) continued throughout the summer. Crews are constructing a new I-4 eastbound off-ramp loop that will reduce delays by allowing traffic to exit directly onto US 17-92. Bridges over Orange Boulevard, the CSX railroad tracks and US 17-92 also are being constructed as part of these improvements. Recent progress includes:

- Installation of bridge pier columns
- Installation of deck beams over Orange Boulevard, the CSX railroad tracks, US 17-92 and the on-ramp from CR 15 to eastbound I-4
- Completion of the new CR 15 and US 17-92 intersection configuration

A new stormwater management facility is also under construction and other drainage improvements are being made. The Florida Department of Transportation (FDOT) began construction in November 2006 and anticipates completion during summer 2008.

Construction of the I-4 eastbound to US 17-92 off-ramp will reduce delays for commuters.
